

Get paid in dollars. Never buy gas.

Sivan pays African freelancers into a real bank account, in dollars, pounds, euros or naira.

Amara invoices London. She waits five days and loses 8%.

5 days

Bank wire

Correspondent banking, every time.

8%

Gone in fees

FX spread stacked at each hop.

Buy a gas token first

The crypto fix

So she does not use it.

Amara is a designer in Abuja. She is the only user this deck is about.

THE PRODUCT

One message. Money in her bank.

- **Lives in her apps**

Telegram, WhatsApp, web and MiniPay.

- **No seed phrase**

The wallet is provisioned for her.

- **No gas token**

She never buys CELO, SOL or ETH.

- **Four currencies**

Dollars, pounds, euros or naira.

We do not ask her to download another app.

MiniPay

Inside Opera Mini

Tens of millions of African users. Listed on Celo.

Telegram

Bot, live

Where the deal is already being agreed.

WhatsApp

Layer built

The default surface in Nigeria.

Web

app.sivantech.online

Full dashboard for businesses.

MiniPay is the unlock. It is a wallet already installed on phones across Africa, and we are a listed app inside it.

Removing the gas token is different work on every chain.

Celo

CIP-64

Gas paid in USDC. Transaction type 0x7b with a fee-currency field.

Stellar

Fee-bump

Our treasury sponsors the fee. Trustlines opened for her.

Base, BSC

Paymaster

Sponsored at the transaction.

Solana

Fee payer

Including rent for a new token account.

Most teams solve one chain and stop. We solved four.

Ten bank accounts issued. Two settlements through them.

10

Virtual accounts issued

Real USD, GBP, EUR and NGN accounts held by users.

\$18 + 24 USDC

Settled on mainnet

Small on purpose. We proved the rail before opening it.

Paying out on four rails today

USD ACH

GBP Faster Payments

EUR SEPA

NGN NIP

Three streams. All charging today.

1.25%

Off ramp

USDC to naira. Returned live by our public fee endpoint.

2.5%

Escrow

Naira agreements. 1.5% on USDC.

0.5%

Transfers

Under \$100. 0.25% above, with a \$0.25 floor.

Remittance into Nigeria costs 5 to 10 percent. We clear it at 1.25 and keep a margin.

Everyone solves one half. The handoff is the gap.

Yellow Card, Onafriq

Naira rails, no chat, no gas abstraction.

Binance P2P

Liquidity, but she still hunts a buyer.

Wise, remittance apps

Bank to bank. Her client pays in USDC.

Self custody wallets

Seed phrase, gas token, no way out.

WHY IT IS SLOW TO COPY

■ Four gas abstractions

CIP-64, fee-bump, paymaster, fee payer. Four problems, not one.

■ Licensed rails, four currencies

Partner agreements and compliance. Money cannot rush that.

■ Identity at the national registry

BVN and NIN. A new entrant starts at zero.

■ Shelf space inside MiniPay

A listing, not a feature.

Yellow Card can add a chat bot. They cannot add our rail in a quarter.

We built the boring parts first.

Structure

- **We hold no fiat**

Balances are stablecoin. Naira moves bank to licensed provider to bank.

- **Licensed partner rails**

Payouts settle through regulated providers, not our own balance sheet.

- **Identity at the source**

BVN and NIN checked against the national registry, not a document upload.

Controls

- **Limits are cumulative**

Ten transfers under a line still add up. Structuring is the first thing a reviewer looks for.

- **Tiered by evidence**

Bank verified, then identity verified, then enhanced. Each tier unlocks a ceiling.

- **AML policy written**

Sanctions screening and record keeping documented before growth, not after.

A banking partner reads this page first. So we wrote it first.

THE TEAM

Building for the market we live in.

Samson Micheal

Founder. Built the ledger, settlement engine and chain adapters.

Jonathan Hart

Co-founder. Growth and merchant onboarding across West Africa.

Abuja, Nigeria. Bootstrapped. We are the user.
